

**Yokohama ADVAN Sport Tire Replacement for Bentley Continental GT & Flying Spur**

**Size: 275/35ZR20: 2039 lbs maximum at 50 psi cold inflation pressure Part Number 10320, “B” symbol on the sidewall.**

**Yokohama requires that the above part number be used in all cases where Yokohama tires are being installed as partial set or full set replacements for the above vehicles, model years 2005 through 2007. Consult the vehicle owner’s manual for correct inflation pressure depending on operating conditions. Correct replacement is assured when you install Yokohama ADVAN Sport tires (part number 10320) in the size listed above which are available through Bentley dealers and all Yokohama tire dealers.**

Yokohama ADVAN Sport tires specified above are designed to achieve specific performance levels defined by Bentley for the Continental GT and Flying Spur. Please be aware that when the time comes to replace Bentley tires it is important to install tires that have the same capabilities as the Yokohama ADVAN original equipment tires.

Replacement tire speed rating and load capacity are two important capabilities that must be present in the replacement tires. These Bentley vehicles are capable of speeds up to 198 mph and have a curb weight of between 5258 to 5456 lbs. with more weight distributed to the front axle than the rear axle. The 20 inch original equipment tires are Z rated which means they have speed capacity above 186 mph and have an equivalent load index of 105 which means they each will carry loads of up to a maximum of 2039 lbs when inflated to 42 psi cold or higher pressure shown in the vehicle owner’s manual up to the maximum of 50psi.

Tires are available from Yokohama and other manufacturers in the same size designation but may carry lower load index and possibly speed ratings. These are not acceptable for replacement of the Bentley OE tire specified above. Winter tires specified by Bentley should be selected based on the Bentley owner’s manual recommendations.
